

Phase 3: Project Design

Match each problem to a solution and lay out the architecture.

Problem-solution fit

Problem	Solution	Benefit
Parcel booking is difficult	Salesforce parcel management	Centralized booking
Tracking requires support	AgentForce AI + Prompt Builder	Self-service tracking
Manual status updates	Salesforce Flows	Automated processes
Delivery communication gaps	Email alerts	Timely notifications
Scattered shipment information	Parcel, Delivery, Sender and Receiver objects	Structured data
Difficult operational monitoring	Reports and dashboards	Better visibility
Different users need different access	Profiles, roles and permission sets	Secure access

Proposed solution

Parameter	Description
Problem	Difficult and inefficient parcel booking and tracking
Solution	Salesforce-based parcel management system
Innovation	AgentForce AI + Prompt Builder for conversational self-service tracking and automated Flows
Impact	Centralized booking, real-time tracking visibility, timely notifications, efficient delivery management
Business model	Parcel, customer, delivery-agent, support and administrator operations
Scalability	Supports growing parcel operations, Experience Cloud and external logistics integration

Solution architecture

Users (Customer, Delivery Agent, Support Staff, Admin) -> Salesforce Lightning / Experience Cloud -> SwiftShip Tracker platform -> Reports and Dashboards -> Parcel tracking and operational insights

- **Data layer:** Parcel, Delivery, Sender, Receiver.
- **Automation layer:** Flows, approval processes, Apex classes, Batch Apex, email alerts.
- **AI layer:** AgentForce AI, Prompt Builder, Parcel Tracking agent.
- **Security layer:** profiles, roles, permission sets, sharing rules, field-level security.
